

Parallel Action Tong Holder

The Parallel Action Tong Holder provides a smooth accurate pickup, reducing wear defects and increasing efficiency.

The new robust linkage style design of this Lattimer Tong Holder can solve many inherent issues experienced with conventional "arcuate" tong holders such as ware checking and tong winking, significantly reducing critical defects.

The movement in this new parallel tong holder has been developed to be precise, accurate and long lasting. Many parts in the assembly are made from lightweight but durable materials which have been proven in our standard tong holders.

The Parallel action also allows extended mould contact time, reducing idle time in the machine and allowing pickup to be much closer to the moulds. These factors coupled together can significantly increase machine efficiency.

Features

- Designed to reduce critical defects
- Extended mould contact time
- Smooth precise action
- Interchangeable with existing tong holders

Part Number: L14510000

Contact Lattimer for more information

Benefits

- Reduction in critical defects
- Increased machine efficiency
- Interchangeable parts
- Robust design
- Supply agreements available
